Orthotic Centre Supporting Excellence

Our Orthotic Centres in Auckland, Christchurch, Dunedin, Hamilton, Invercargill and Wellington deliver clinical services and product to private and ACC clients. Subsidiary One Orthotics provides an extensive range of orthotic solutions to New Zealand’s Allied Medical professionals. Supporting excellence is important to us and the Orthotic Centre places a strong emphasis on maintaining high professional standards and quality.

We have been servicing and supporting the New Zealand Health industry for over 20 years and are proud to present our range for 2017. Sourced from world leading manufacturers we have selected some of the best products available capitalising on the knowledge and experience of our own clinical specialists.

Throughout the following pages you will find solutions for a large range of conditions and we invite you to discuss with us any specialist needs you may have. Our procurement team are constantly sourcing specialty products from our vast network of manufacturers.

Soft Collar

Can be used to support necks during recovery from minor injuries.

Lerman Noninvasive Paediatric Halo

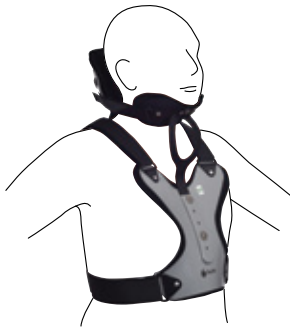

A pinless halo system for children designed with the goal of providing cervical spine immobilisation and control similar to a standard halo, but in a less invasive manner.

Code
C-24_M

Lerman Minerva Orthosis

Used to support and stabilise cervical spine and upper thoracic spine after injury or surgery. C2–T3 stable fractures, muscular/ligamentous injury, degenerative joint disease, cervical pain, nerve impingement.

Code	Size
A19-303	PAED
A19-300-00SM	S
A19-300-00RG	M

Aspen CTO

Combines highly effective motion restriction of the cervical and upper thoracic spine with a level of comfort that makes it well tolerated by patients. Research has shown substantially progressive motion restriction in going from a stand-alone cervical collar, to a two-post device, and then on to a four-post orthosis.

Code	Size

28U22=R45-48	45-48 - R

WalkOn Reaction

People with permanent dorsiflexor weakness depend on a medical aid that lifts their foot while walking. That is precisely what the WalkOn Reaction does. It helps lift the foot during the swing phase, so that the gait becomes safer while the risk of stumbling and falling is reduced. The tip of the foot no longer gets caught as easily on small obstacles or uneven ground.

Thanks to its special design, the WalkOn Reaction supports the knee joint as well. When the foot lowering musculature is impaired in addition, you also benefit from the high energy return of the orthosis, which is activated during the rollover motion of the foot. You walk more naturally again.

Mayo Clinic Aircast Elbow Brace

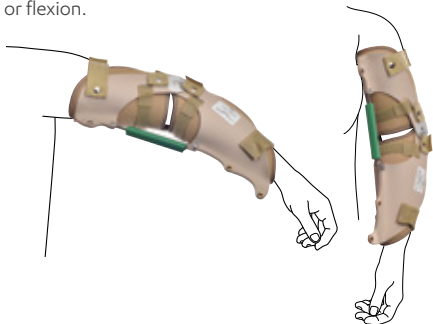

For use immediately after surgery to protect and immobilise the elbow joint. In the immediate post injury or post surgical period, the brace may be used to comfortably immobilise the elbow due to the effectiveness of the aircell strapping systems. For static stretch, the control knob is set to the desired degree of flexion/extension. Once the arm muscles have stretched to the designated degree, the muscles can relax minimising the inflammatory response that can occur in dynamic stretching. In addition, the control knob can be unlocked allowing for free range-of-motion (ROM). This unique feature enables the patient to have the benefits of stability and protection while promoting elbow movement to prevent or treat contractures.

Code	Size
MAYOL	L
MAYOR	R

Turnbuckle Elbow Orthosis

Dynamic elbow extension and elbow flexion splint applies low-loaded force to increase elbow extension or flexion.

Code	Size
33800TBS	S
